

Dimensions

Electrical connection

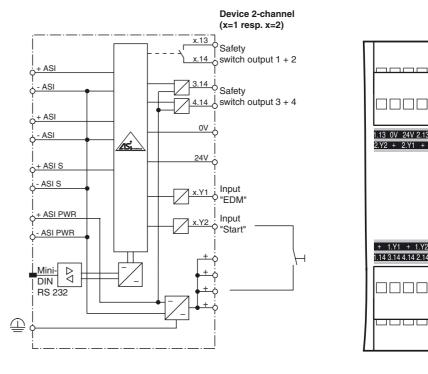

Model number

VAS-4A16L-K31

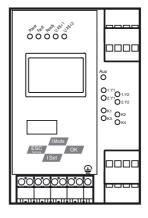

Safety Monitor, 16 decentralized output circuits

Features

- Certified up to SIL 3 according to IEC 61508 and EN 62061 and up to PL_e according to EN 13849
- · Stainless steel housing
- LC display for slave addresses and error messages
- Configuration and commissioning with configuration software
- 2 safe output relays and 2 safe electronic outputs
- 2 AS-Interface networks
- Memory card for configuration data

Indicating / Operating means

Technical data		
General specifications		
AS-Interface specification		V3.0
PLC-Functionality		none
Duplicate address detection		from AS-Interface slaves
Earth fault detection	EFD	integrated
EMC monitoring		integrated
Diagnostics function		Extended function via display
Switch-on delay		< 10 s < 40 ms
Response delay UL File Number		E223772
Functional safety related parame	eters	LEEGITE
Safety Integrity Level (SIL)	,,,,,,	SIL 3
Performance level (PL)		PL e
MTTF _d		200 a
B _{10d}		2 E+7
Indicators/operating means		
Display		Illuminated graphical LC display for addressing and error messages
LED FAULT		Error display; red LED red: Communication error red flashing: release circuit error
LED POWER		voltage ON; LED green

Function

The VAS-4A16L-K31 is a stainless steel safety monitor for 2 AS-Interface circuits in accordance with AS-Interface specification 3.0 with degree of protection IP20. The VAS-4A16L-K31 has four inputs and four outputs. Two inputs are used for extended EDM device monitoring. Due to the 16 independent AS-Interface release circuits, several safe AS-Interface outputs are possible on one address. The K31 model is particularly suitable for installation in a control cabinet.

Two safety relays provide a safe interface to the connected consumers.

Address assignment and the transfer of the desired configuration can be performed using switches. Five LEDs located on the front panel indicate the current status of the AS-Interface segment. Local operation using the graphical display and the four switches allows all the functions covered on the other AS-Interface masters by AS-i Control Tools software to be visualized on the display. An RS 232 socket provides a way of exporting data relating to the network and operation directly from the safety monitor for extended local diagnosis purposes.

Software

The configuration is made via the configuration software VAZ-SW-SIMON+, which runs on any Windows XP/Vista Standard-PCs.

Accessories

VAZ-SW-SIMON+

Software for configuration of K30 Master Monitors/K31 and KE4 Safety Monitors

USB-0,8M-PVC ABG-SUBD9 Interface converter USB/RS 232

Standards
